CAPABILITIES SUMMARY

A SINGLE PLATFORM FOR UNLIMITED AUTOMATED PROCESSES

AUTOMATION VERTICAL INDUSTRIES

- Financial
- Health Care
- Technology
- Government
- Retail
- Hospitality

TOP USES FOR AUTOMATION

- FTP/SFTP
- Automated Report Generation and Distribution
- Batch Processing
- Application Integration
- Database Queries, Transactions and Jobs
- Job Scheduling
- Web and Screen Scraping
- Replacing Scripting

AUTOMATION EXAMPLES

- SharePoint
- Exchange
- Active Directory
- ERP/CRM
- VMware

IT AND BUSINESS PROCESS AUTOMATION

Every organization is bogged down with manual, repetitive, time consuming processes that are important, but not a strategic use of costly existing human capital. To address this issue, Spotswood Consulting, provides an easy-to-use, drag-and-drop automation solution.

By automating mundane, yet important processes, Spotswood Consulting's customers are able to:

- Lower costs, hassles and time associated with developing and maintaining code, scripts and batch files
- Achieve an average ROI in two months or less
- Eliminate errors and response times resulting in increased productivity
- Re-focus employees to strategic activities, where human interaction and thought add the most value
- Streamline inefficient processes and operations with reliable, repeatable, error-free automation
- Orchestrate high-level, strategic initiatives involving multiple departments, systems, and applications
- Centralize the management, control, and security of automation across the enterprise
- Enable a wide range of automation imperatives encompassing data aggregation, application integration, system/application/network monitoring and problem resolution, disaster recovery, file/data backup, and much more
- Reduce process delays caused by computer downtime or employee off-time
- Eliminate errors introduced by process delays and repetitive worker activities
- Give knowledge workers access to fresher, more accurate data so they can make better, more informed decisions
- Provide a platform for enhanced collaboration between business users and technical personnel for continuous process improvement
- Make organizations more nimble and agile so they can respond to changes quickly
- Enhance process compliance capabilities for improved adherence to government and industry regulations and requirements
- Optimize the key processes that attract business, regardless of existing infrastructure and legacy applications
- Eliminate the need for one-off scripts and code dispersed across the enterprise
- Improving workforce productivity by eliminating costly, repetitive, and mundane activities

Spotswood Consulting is able to set an entirely new standard for server and desktop automation. Built on the experience earned from delivering automation to customers across multiple vertical markets. New features in the automation solution now add the power of virtual and cloud-based SharePoint automation, computing environments, plus improved web-app interaction, to its proven and award-winning track record.

Unleash the power of today's cost-friendly, flexible, on-demand computing resources, paired with your on premise IT infrastructure. Integrate the Cloud with your in-house servers and software systems by using dynamic, easy-to-deploy drag-and-drop tasks — all without writing a single line of code.

Spotswood Consulting can assist you with automating repetitive manual process or tasks to reduce your operational costs and gain efficiencies.
